- EVMS Clinical Skills and MD Admission
- Annual Medical Education Conference (representatives from med schools, attend panels, etc)

MINORITIES IN MEDICINE
We hope to inspire incoming and current pre-medical students!

A MAPS CHAPTER

CONTACTS
President- Moesha Parsons (mparson@email.wm.edu)
Vice President- Chelsea Scott (cbscott01@email.wm.edu)
Advisor- Dr. Sher (btsher@wm.edu)
### Mission Statement

- The aim of this organization is to increase diversity in the health field in order to create the next generation of clinically excellent, culturally competent and socially conscious healthcare providers.

### Purpose

- Promote the advancement of minority students who follow a pre-medical career path
- Provide equitable opportunities for minority pre-health students through the promotion of resources that may serve as tools for academic and extracurricular achievement

### Testimonies

- **Bryonna Elliot (Pre-MD)**
  
  “MIMs afforded me so many resources and sources of motivation and encouragement. MIMs has given me community and a little family of upperclassmen that put my situation in perspective because, they’ve been where I am, and they are where I’m trying to go. Having the ability to see others who look like me in the different stages of their journeys has been both exciting and inspiring for me.”

- **Alondra Burton (Pre-PA)**
  
  "MIMs has given me the opportunity to learn about all aspects of joining the healthcare field. The information gained from meetings and events are super useful, and they offer unique opportunities to travel to all sorts of medical conferences and medical schools! Without MIMs I would be clueless about the opportunities I have as an undergrad to get a leg up on the competition!"

### Goals

- Enhance minority recruitment into the medical field from the College of William & Mary
- Familiarize students with admissions process, increase confidence and assurance, and enrich the academic and professional development of these students, and foster competitive candidates for professional medical programs
- Produce competitive health profession applicants
- Diversify health professional school enrollment and the health professions workforce
- Prepare pre-health students from: underrepresented minority group, a medically underserved area and/or from a disadvantaged background
